Company Name Hycon Mfg. Company 29 South Pasadena Avenue Pasadena, California		ENGINEERING STUDY <input type="checkbox"/> CHANGE PROPOSAL <input checked="" type="checkbox"/>		Proposal No. Hy - 1						
DATE 5-6-59		AFFECTS: WSPO <input checked="" type="checkbox"/>		PROJECT <input checked="" type="checkbox"/>						
NAME OF MAJOR COMPONENT 73-B Configuration		PART OR LOWEST SUB-ASSEMBLY Stand Assy, 100" Collimator		PART NO. & MODEL OR TYPE 735630						
TITLE OF PROPOSAL: New Metal 100" Collimator Stand										
NATURE OF PROPOSAL: A new all-metal collimating stand for the 100" collimator is required to replace the existing temporary wooden stand. This will provide for the operator a tool which is a stable platform with which he can readily position the collimator in any desired attitude with a minimum of effort. The stand will be a light-weight, rigidly constructed unit, which can easily be collapsed for storage or shipping. The collimator will be mounted on linear bearings for rapid manual end-to-end traverse. The side-to-side angular positioning is accomplished by turning a hand crank operated lead screw. The collimator moves from side to side on ball bearings that ride in radiused tracks. The collimator can be locked in any desired position with knurled thumb screws. The legs will have leveling screws to compensate for uneven floors. Rubber tire casters will be provided on two of the legs to facilitate positioning of the collimator under the 73-B Configuration.										
REASON FOR PROPOSAL: These new stands are required because the existing temporary wooden stands are not precision in their operation and do not provide a stable platform for the collimator. Much valuable time is expended in positioning, adjusting, locking and steadying the collimator while using the wooden stand. The new stand with casters will facilitate post flight collimation checks on 73-B Configurations.
